JAYA COLLEGE OF ARTS AND SCIENCE-THIRUNINRAVUR

TEACHING- LEARNING PROCESS:

Our college assists students in keeping the information from the curriculum in their minds. As a result, they are better able to organize their thoughts, communicate clearly in writing or verbally, conduct in-depth analyses of problems, make plans, and generate original ideas.

The technique of mind mapping is available in almost every department. This provides a significant contribution to students' learning, especially the implementation of the constructivist approach prepared by the students themselves inside the classroom.

Mind mapping by the Department of ECS and physics students

Presentation by the students of Biotechnology Department

Mind mapping by the students of the Department of English

Diagrammatic representation done by Literature Students

BEST PRACTICE-2:

SKILL- DEVELOPMENT CENTER

Jaya College of Arts and Science established the SKILL DEVELOPMENT CENTER in order to encourage and motivate students to do the projects in an effective and efficient manner. The best projects from all departments will be added to the center each year. It is suggested that staff members keep the skill-development center up to date by helping students with more minor and major projects and encouraging them to work on practical projects.

Skill -Development Center

Projects from the skill development Center:

Students from the biotechnology department cultivated mushrooms

Voice recognition for automatic on/off control
